

Architecture interview - Store List

Question

Design the first screen within a new app that will present a list of stores to the client.

This screen represents the homepage of the app as a store list. Please take note of the Favorites feature represented by the heart in the diagram.

We should be designing a full working system that will eventually scale to support multiple teams of engineers - starting with the API contract coming from the backend, through the app's networking capabilities, presentation design and everything in between.

This will be the first feature within a new app - so reusability and testability is needed and should be discussed.

Improvements and enhancements are welcome.

Here is a sample sketch of the UI we are aiming for:

Donut heaven

Donuts, sweets, deserts
4.8* (375)

1 mile - 18 min
\$1 delivery fee

Wingstop

Wings, Nuggets.
4.5* (529)

5.7 miles - 35 min
\$0 delivery fee

Dunkin
